

Android 虚拟机 docker

<https://github.com/zhangazheng/vmConsole/blob/main/SETUP.md>

APK

1. docker

```
service docker start
rc-update add docker
```

2.

```
sed -i -E 's/(local kernel_opts)=.*\1="console=ttyS0"/ /sbin/setup-disk
```

3.

```
~#setup-disk
setup-disk
Available disks are:
sda (34.4 GB QEMU QEMU HARDDISK )
sdb (34.4 GB QEMU QEMU HARDDISK )
Which disk(s) would you like to use? (or '?' for help or 'none') [sda]
The following disk is selected:
sda (34.4 GB QEMU QEMU HARDDISK )
How would you like to use it? ('sys', 'data', 'crypt', 'lvm' or '?' for help) [?] sys
WARNING: The following disk(s) will be erased:
sda (34.4 GB QEMU QEMU HARDDISK )
WARNING: Erase the above disk(s) and continue? (y/n) [n] y
Creating file systems...
Installing system on /dev/sda3:
/mnt/boot is device /dev/sda1
100%
initramfs: creating /boot/initramfs-virt
/boot is device /dev/sda1
Installation is complete. Please reboot.
~#reboot
reboot
```

4.

root docker linux

- 22,80,443,5244,5678,6000
- poweroff,
